

Product Manager

[Linkedin](#)[Portfolio](#)[Github](#)

KEY SKILLS:

- **Product:** Feature Prioritization, Roadmap design, Feature docs, Design Thinking
- **Marketing:** Market Research, Competition Analysis, Campaign contents
- **User education:** Tutorials, Help docs, Announcement posts, Training content
- **UI/UX Design:** High Fidelity and Low Fidelity wireframes of feature prototypes
- **User research:** Customer Journey Mapping, interviews, Hackathons, Surveys
- **Project Management:** Zoho CRM, Zoho projects, Epics, User stories, Tasks and Acceptance criteria
- **Business:** Business Model Canvas, Lean Model Canvas, UCD

TECHNICAL SKILLS

- **Prototyping:** Mockflow, Figma, Balsamiq, Invision
- **Database:** PostgreSQL
- **Affinity mapping:** Miro
- **Visualization:** Zoho Analytics, Tableau Desktop 10, Python lib
- **Coding:** Python pandas, TCL
- **Product:** Product Strategy, Roadmapping, User Research, UX Design, Feature Prioritization, Platform Thinking
- **AI/ML:** ML Workflows, GenAI, LLM, RAG, Knowledge Systems, Model Deployment Basics
- **Technical:** Pandas, Sci-kit learn, APIs, LangChain, LangGraph, Ollama
- **Tools:** Mockflow, Figma, Zoho Analytics, Tableau, VS Code, PyCharm, Codex, Claude Code

GOUTHAM RAVI KUMAR RAVUTLA

Email : gouthamravikumar1994@gmail.com

Mobile : 9704699036, 6301995284

SUMMARY

- Associate Product Manager with **3+ years** of experience in B2B SaaS with 5 years in software background, built and launched AI/ML and Generative AI platform capabilities at Zoho QuickML.
- Excel at simplifying complex AI workflow for users and driving product decisions through technical analysis, customer insights and market research
- Experienced in platform thinking, API-first systems, and cross-functional execution across engineering, data science, marketing, user education, design teams.
 - Seeking **Product Manager / Technical Product Manager** roles in companies that focus on building AI platforms, developer platforms, and intelligent SaaS products.

WORK EXPERIENCE

ZOHO CORPORATION PVT LIMITED

2023 - PRESENT

Associate Product Manager

Catalyst QuickML (Centralized AI Platform)

Responsibilities:

- Owned design and evolution of pipeline builder (core workflow engine) enabling end-to-end ML pipeline creation through a drag-and-drop interface, reducing complexity for non-technical users.
- Led product definition for Generative AI capabilities including LLM serving, RAG-based knowledge systems, and foundational model integrations.
- Designed and enhanced API-first platform capabilities including ML and GenAI endpoints, bulk prediction workflows, and scalable API interactions.
- Solved key user challenges by introducing API-based document ingestion for knowledge bases, enabling scalable multi-file uploads and improving usability for enterprise workflows.
- Influenced roadmap decisions through competitor benchmarking, customer feedback, and collaboration with data science and leadership teams.
- Contributed to development of Smart Builders enabling pre-configured workflows for recommendation, forecasting, NLP, and anomaly detection use cases.
- Led cross-functional execution across 6+ teams including engineering, data science, design, and marketing to align feature delivery and product direction.
- Delivered 10+ product demos and customer interactions, translating complex AI capabilities into business use cases and influencing feature adoption.
- Supported platform adoption across 2K+ businesses and tracked feature adoption, usage, and health metrics through monthly analysis.

HCL TECHNOLOGIES

2017 – 2023

Senior Software Engineer

Clients: Cisco & Organon

Responsibilities:

- Built strong technical foundation across network systems, data workflows, and enterprise platforms. Automated testing and validation across 40+ network switching platforms using TCL and Python; improved efficiency by reducing test scope from 10K → 4K cases through optimization.
- Contributed to system-level implementations including Quad-Sup VSS configurations, strengthening understanding of complex distributed systems.
- Led data migration and validation workflows across 70+ business teams, processing 150K+ documents through ETL pipelines while ensuring data quality and consistency.
- Developed exposure to data transformation, reporting (**Power BI**), and automation, enabling structured handling of large-scale enterprise data systems.

QUALIFICATIONS

- ↳ **Executive MBA:** Indian Institute of Management-Kozhikode, 2021-24
- ↳ **EDP in Advance Product Management:** XLRI Jamshedpur, 2022
- ↳ **B.E/Tech in Electrical & Electronics Engineering:** ANITS, 2015

ACHIEVEMENTS

- Won **1st & 5th places** in **PM School Live Challenges 66 & 68** on Topics Improving User Engagement for Spark Studio & Unlu platforms
- **Zonal winner at IIT Hyderabad** for BrainTech-2016 Network& Cyber Security Championship
- Got **6th Rank** in District Level **Mathematics Olympiad** conducted by Masterminds Institution in 2009

CERTIFICATIONS

- Completed '**Advanced Product Management: Vision, Strategy & Metrics, Leadership & communication**' certifications from Udemy
- **Agile-Scrum** Master 24 hours PDU's from Exin
- **CBAP** certification Training of 35 hours of PDU's from IIBA.
- Tableau Desktop 10, PostgreSQL, Data Analysis certifications from Simplilearn.

PERSONAL INFORMATION

- ↳ **Date of Birth:** 3rd Aug 1994
- ↳ **Languages Known:** English, Hindi, Telugu
- ↳ **Address:** Bangalore

PROJECTS

PM Navigator (2026) Github link	RAG + Multi Agentic systems
Vision: To assist the PM job aspirants in achieving their goals to transition to their interested jobs.	
The Product: An AI-powered multi-agent system with RAG system that analyzes the live PM job market, extract skills and analyses with industry standard competency frameworks, compares them against market requirements, identifies skill gaps, and generates a personalized & market-driven 30/60/90-day learning plan in minutes.	
Tools used: Ollama, qwen2.5:14b, mxbai-embed-large, Tavily, Serper, Streamlit, Telegram	
Technical implementation • Built with master AI agents and its sub agents locally using Ollama, utilizing qwen2.5:14b as a base LLM. Agents execute a dedicated task in the pipeline in sequential and parallel architectures with critique agents in a reflexion pattern, to generate best quality response. • Equipped with tools to connect agents to the internet for job market research and sub agents to accomplish targeted tasks. • Implemented a vector database using ChromaDB of product management frameworks as a Knowledge Base using mxbai-embed-large model. The chunks embedded are retrieved using the RAG system. Its job is to match the skills extracted from the resume with standard frameworks used in further analysis in the pipeline.	
Food Detector App (2025) Blog link	Vision Modelling
Goal: To create a fully functioning food recognition app that can classify 101 different food items with the basic capability to upload multiple images, and generate accurate responses with confidence scores.	
Tools used: EfficientNetV2B0 algorithm, Streamlit, Telegram	
Technical implementation • Built a food image classification application with an end-to-end training and evaluation pipeline in local machine using EfficientNetV2B0 transfer learning, custom preprocessing workflows, and automated performance checks. • Designed a feedback-driven dataset improvement loop by merging user-submitted images into the training pipeline for continuous model refinement. • Improved model reliability through class-imbalance handling, dataset quality controls, and debugging across preprocessing, model loading, and evaluation workflows. • Gained hands-on experience in computer vision pipeline design, model evaluation, and practical MLOps-style iteration.	
HARDCOPY (2021) Blog link	Peer-to-peer mobile app
Mission: To make all the Unused Books available for all the customers.	
• Founded an e-commerce platform named HARDCOPY, focused on enabling its end users to engage in peer-to-peer lending & borrowing of their books. • Conducted Exploratory user research using interviews, and surveys and received around 55 responses to the questionnaire • Managed a 5 member cross functional team during Market research & Segmentation, implementation of lean methodologies • Scoped out features & created around 100 basic low fidelity wireframes, and built the basic product roadmap & strategy for the mobile app • Designed a website to take idea to online masses & validate the product market fit of the platform with a questionnaire to gather the data required for analytics to derive an MVP
